

Ammonium Sulfate Remains Sulfur Fertilizer of Choice per Latest Findings

Learn the latest on the effectiveness of ammonium sulfate versus new granular sulfur fertilizers in a [free webinar replay](#) from CropLife, sponsored by AdvanSix Inc. and led by Dr. S.H. (Norman) Chien, former principal scientist in Soil Chemistry at the International Fertilizer Development Center. The webinar is based on the review of lab, greenhouse and field research from scientific literature published in *Agronomy Journal** in 2016. The reviewers concluded:

- Claims pertaining to season-long sulfur availability to crops from granular elemental sulfur fertilizers the season of application are unfounded.
- A more effective way to provide sulfur throughout the season is to split-apply granular ammonium sulfate, whether straight or in blends.

For a short summary of the webinar, please read a one-page recap [here](#). More details are available in the full literature review [here](#).

Useful Resources

Sulf-N[®] ammonium sulfate is an excellent source of ammonium-N and sulfate-S, which are both immediately available to plants. For more information on Sulf-N[®] benefits, [visit this page](#) or contact [Mercedes Gearhart](#), Senior Agronomist at AdvanSix.
