

Sulf-N[®] News: Increasing Soybean Yields

February, 2019

Using 4R Nutrient Stewardship for 2X Greater Efficiency

Lack of sulfur (S) and nitrogen (N) can be a weak link to achieving higher soybean yields, but choosing the right fertilizer using 4R nutrient stewardship can solve that challenge.

Check out this [soybean infographic](#) to see how considering the **right rate, right time, and right place** clearly makes Sulf-N[®] ammonium sulfate the **right source**.

Sulf-N[®] fertilizer supplies immediately-available S and non-volatile N to supplement your crop's needs. In fact, field work at Purdue University showed it to be **2x more efficient** than granular products and blends where one-half the S is in the elemental form.

Useful Resources

Sulf-N[®] ammonium sulfate is an excellent source of ammonium-N and sulfate-S, which are both immediately available to plants. For more information about Sulf-N[®] benefits, [visit this page](#) or contact [Mercedes Gearhart](#), Senior Agronomist at AdvanSix.
