

## ADVANSIX DONATES COMMUNICATIONS EQUIPMENT TO HOPEWELL FIRE AND RESCUE

**Hopewell, Va., April 2, 2019** – AdvanSix said today it has donated equipment valued at \$5,000 to Hopewell Fire and Rescue to assist and improve communication for firefighters onboard a fire engine. The Hopewell plant donated money to purchase two intercom headset systems to improve safety and responses to an emergency.

Hopewell Plant Manager Fred Harry said, “AdvanSix was happy to purchase these headsets to provide safer, more effective and efficient operations to our first responder partners.”

“Communication is critical for firefighters,” said AdvanSix Health and Safety Manager Daniel Wingler. He added that the headsets work with a department’s two-way radio allowing crews to receive critical updated information as they respond to the emergency scene as well as discuss their initial actions upon arrival. The noise reduction feature of the headset system also protects firefighters hearing which without protection can be damaged over the course of a career.

Hopewell Fire Chief Donald Hunter said he is grateful for the partnership with AdvanSix, “The funds from AdvanSix to buy new equipment helps our firefighters, helps our community, and gives us the extra edge we need to respond to calls quickly and safely.”

AdvanSix works closely with local fire departments throughout the year on emergency drills and other training, and joint programs focused on ensuring a safe community. The company has donated more than \$40,000 in equipment and other resources to local fire departments since 2011 and many of its employees serve on public safety boards or as volunteer firefighters in their communities.

More than 700 people work at AdvanSix's Hopewell site. It is one of the world's largest single-site producers of caprolactam, a primary feedstock for nylon polymers, and a global leader in the production of ammonium sulfate fertilizers.

**About AdvanSix**

AdvanSix is a leading manufacturer of Nylon 6, a polymer resin which is a synthetic material used by our customers to produce engineered plastics, fibers, filaments and films that, in turn, are used in such end-products as automotive and electronic components, carpets, sports apparel, fishing nets and food and industrial packaging. As a result of our backward integration and the configuration of our manufacturing facilities, we also sell caprolactam, ammonium sulfate fertilizer, acetone and other intermediate chemicals, all of which are produced as part of our Nylon 6 integrated manufacturing chain. More information on AdvanSix can be found at <http://www.advansix.com>.
