Capran® HS Red Tinted, Heat-stabilized Blown Nylon 6 Film

Description

Capran® HS Red is a red tinted, heat-stabilized blown film produced from low lactam nylon 6 resin. It is recommended as a bagging film for advanced composite fabrication and other high-temperature applications where softness and workability are essential. Capran® HS Red has excellent heat stability and resistance to pin-holing, and is available in sheet, tube and V-sheet in widths ranging from 48” to 80”.

Capran® HS Red, like all nylon films, is a hydrophilic or water-sensitive material. Moisture and water act as plasticizers. The higher the moisture content of the film, the more flexible it becomes. The lower the plasticizer content, the stiffer it becomes. The level of moisture content at time of use is an important factor for successful performance.
