

How Ammonium Sulfate Maximizes Yields and Efficiency

We invite you to watch this 5-minute video (link below) about the value of ammonium sulfate (AS) in a fertilization program as an alternative to ammonium nitrate (AN). Agronomy and field experts cite several reasons why Sulf-N® ammonium sulfate is a preferred fertilizer choice within the 4R nutrient stewardship approach, including the fact that it:

- Resists nitrogen loss.
- Supplies sulfur, an essential plant nutrient that works hand-in-hand with nitrogen in protein synthesis, optimizing nitrogen use efficiency.
- Helps increase the availability of phosphorus and key micronutrients.
- Minimizes greenhouse gas emissions and groundwater pollution.
- Is compatible with other fertilizers, including urea.
